

Our Earth

By: Riya Roopesh Nambiar

How do trees help us?

Have you ever thought?

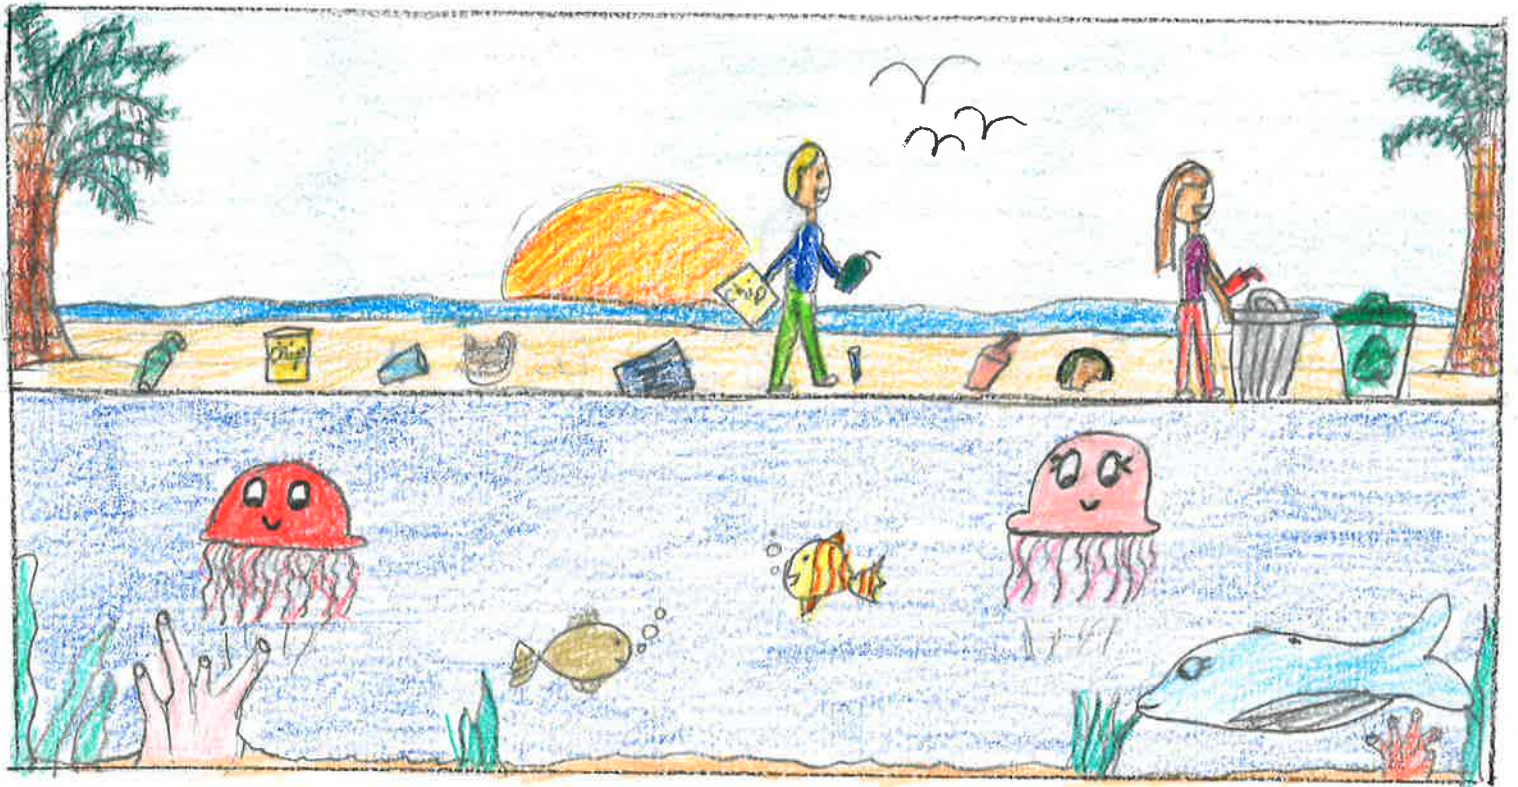

They give us oxygen, they give us food,
We owe them all we've got!

They're home to birds and animals,

So let's not cut them down!

But if we really have to,

Then let's plant more around!

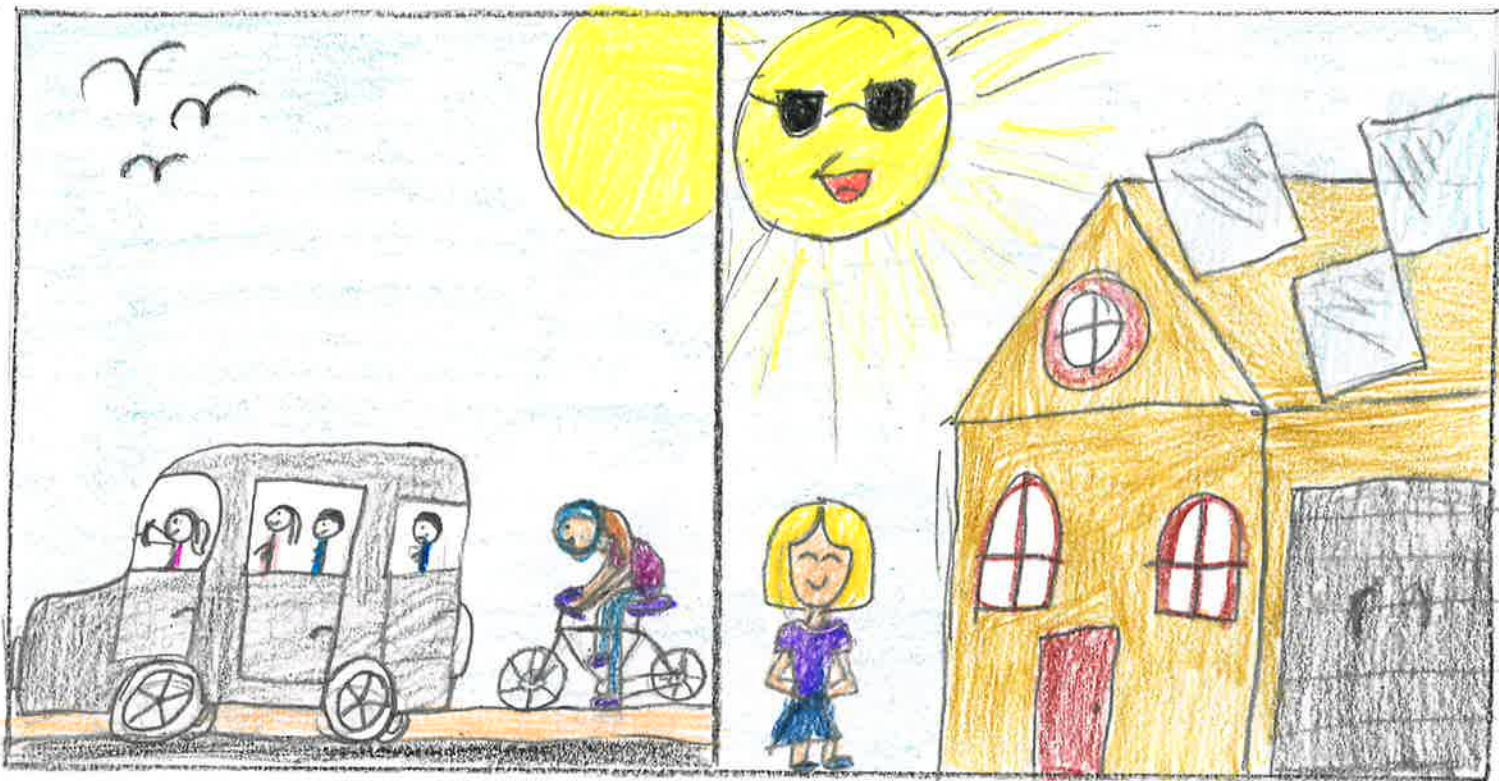

How do we keep our oceans clean?

Have you ever thought?

Let's not litter on our beaches,
And recycle as we've been taught!

Oceans are home to so much life,
They make up $3/4^{\text{th}}$ of the earth!
Let's protect it with all our hearts,
It's what gave the first living organism birth!

How do we keep our air fresh?

Have you ever thought?

How about we carpool,

Or use our bikes a lot?

Let's cut down fewer forests,

More solar panels we can build!

Let's use our sun's energy,

And prevent the air from being smoke-filled!

How can we stop using plastic?

Have you ever thought?

Let's all use reusable grocery bags,
And recycle all plastic we earlier bought!

Our animals are eating the plastic,
And dying before their time!

Say no to plastic spoons, forks, and straws,
Against our environment, let's not commit a crime!

So let's all stop and think,
About how to save our planet,
Because this is our only home,
And I believe it's completely worth it!!
